EXPLANATORY NOTES

Introduction

This publication contains results of a survey of the earnings and hours of employees, conducted in respect of the pay-period which included 21 May 1979. Preliminary results were published on 15 October 1979 in *Earnings and Hours of Employees, Distribution and Composition, May 1979 (Preliminary)* (6305.0). Earnings and hours surveys have been conducted in May each year from 1974. A copy of the questionnaire used in the survey is shown on pages 6 and 7.

Scope of the survey

2. All wage and salary earners were represented except;

- (a) members of the defence forces,
- (b) employees in agriculture,
- (c) employees in private households employing staff,
- (d) waterside workers employed on a casual basis,
- (e) persons employed by private employers (other than hospitals) not subject to payroll tax,
- (f) employees on workers compensation.

All hospitals, whether subject to payroll tax or not, were represented in the survey, but other exempt non-government bodies, such as religious and benevolent institutions, were excluded. At the time of the selection of the sample, payroll tax was payable by employers in the States and Territories paying \$60,000 (Queensland \$125,000) or more a year in wages and salaries. It should be noted that changes in payroll tax exemption levels may affect the comparability of survey results for different years.

Coverage

3. The survey covered all Australian and State Government departments and authorities, and stratified random samples of local government authorities, hospitals and private employers subject to payroll tax.

Survey design

4. The majority of employers selected were requested to supply relevant details, on separate questionnaires, for only a sample of their employees. Individual employees were randomly selected by the employers in accordance with instructions supplied by the Bureau. Employers with fewer than 10 employees were required to complete a separate questionnaire for every employee.

5. Although the sample was not designed to provide estimates of numbers of employees, it is estimated that 2,634,000 male and 1,435,000 female employees were within the scope of the survey. These and other estimates of numbers of employees included in this publication should not be taken as measures of total employment in the categories indicated.

Reliability of estimates

6. Since the estimates in this publication are based on a sample, they may differ from the figures that would have been produced if the information had been obtained for all employees. One measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample of employers and employees was included in the survey. For further details on the reliability of the estimates see the Technical note, page 43.

7. With the exception of estimates relating to occupations, overtime earnings and hours, payment by measured result and other pay, estimates with a relative standard error greater than 15 per cent have not been included in tables in this publication. For the occupations shown the relative standard errors are all less than 7 per cent. For other categories all estimates for which the relative standard error is less than 20 per cent have been published; estimates whose relative standard errors are 20 per cent but not more than 30 per cent have also been published if the standard errors are not greater than \$1.00 or 0.5 hours.

Classification of industry and occupation

8. Industry is classified according to the *Australian Standard Industrial Classification (ASIC)* and occupation according to the *Classification and Classified List of Occupations, Revised June 1976*. The table on page 4 shows details of the ASIC industries used in the survey.

Interpretation of estimates of occupational earnings and hours

9. The descriptions of occupations published in Tables 46 and 47 adhere to those in the classification mentioned in paragraph 8. The descriptions in the classification were designed to cover the entire labour force and may not accurately reflect the restricted coverage of employees included in these tables. It should be remembered that Tables 46 and 47 relate only to *full-time, non-managerial employees*. All employers and self-employed persons are therefore excluded, as are managerial, executive, professional and higher supervisory staff. Also, employees of many small firms and some other employees were excluded from the survey. (See paragraph 2.) Hence the averages shown should not be interpreted as representing the earnings and hours of all employed persons. Where applicable, an occupation includes apprentices, trainees etc. as well as persons fulfilling the requirements of the occupation, irrespective of their qualifications.

Industry Classification table (see paragraph 8)

(b) Excludes defence forces. (c) Excludes agriculture and services to agriculture (sub-divisions 01 and 02) and private households employing staff (sub-division 94).

10. Estimates of average weekly earnings and average hourly earnings contained in this publication may not be strictly comparable with those of earlier surveys because the payroll tax exemption limits have been raised considerably, particularly since 1976, thus excluding more of the smaller firms, whose employees generally have slightly lower average earnings.

Comparability of results

11. Because of differences in scope and definitions, the results of the survey are not directly comparable with those of similar surveys and series such as the October surveys *Earnings and Hours of Employees* (6304.0) and the quarterly series *Average Weekly Earnings* (6302.0). In the October surveys 'adults' include persons under 21 years of age who are paid at adult rates; in the May 1979 survey such persons were included with others under 21 years of age. Details of scope, coverage, and definitions for the surveys mentioned above and also those conducted in earlier years are summarized in *Year Book Australia*, the *Labour Report* and *Labour Statistics* (6101.0).

Definitions

12. *Specified pay-period* is the pay-period which included 21 May 1979. In general, where an establishment was closed down for part or the whole of that pay-period or operations were seriously curtailed by an industrial dispute, breakdown, fire, etc., the employer was asked to supply survey particulars for the previous normal pay-period.

13. *Employees* comprise male and female wage and salary earners (as defined in paragraph 2) who received pay for the specified pay-period.

14. *Private employees* are employees of private employers subject to payroll tax and employees of non-government hospitals not subject to payroll tax.

15. *Government employees* are civilian employees of Australian and State government departments, authorities and semi-government bodies, and of local government authorities.

16. *Full-time employees* are employees who received pay for the specified pay-period and whose standard (or rostered) weekly hours of work (see paragraph 19) for that pay-period were at least 30 hours. Included are full-time employees who began or ceased work during the pay-period and full-time employees on paid annual leave, paid sick leave and paid holidays. Some employees (e.g. aircrews, teachers, university lecturers), although paid for a weekly attendance of less than 30 hours, were classified as full-time.

17. *Part-time employees* are those employees who ordinarily worked less than 30 hours a week and who received pay for the specified pay-period.

18. In the private sector, *non-managerial employees* were defined to include minor supervisory employees, leading hands, clerical and office staff as well

as ordinary wages employees. They exclude *managerial, executive, professional and higher supervisory staff* who, in the private sector were not further defined. In the government sector, *managerial, executive, professional and higher supervisory staff* were generally defined as those employees (a) who were ineligible to receive payment for overtime, or (b) who, although subject to payment for overtime, were in charge of a significant number of employees in a separate establishment (or establishments). For some occupations in government employment, such as school teachers and nurses, there is no general payment for overtime. In these cases, managerial, etc. staff were determined according to the degree of supervision exercised or in relation to the pay structure of associated administrative employees.

19. *Standard (or rostered) weekly hours* refers to the number of hours constituting a full week's work for the specified pay-period.

20. *Weekly hours paid for* refers to the hours for which payment was made. It comprises *ordinary time hours* (see paragraph 21) and *overtime hours*, which are those in excess of ordinary time hours. Weekly hours paid for were not reported for managerial, executive, professional and higher supervisory staff.

21. *Ordinary time hours* refers to award, standard or agreed hours of work. It includes stand-by or reporting time which are part of standard hours, and that part of paid annual leave, paid sick leave and long-service leave taken during the specified pay-period.

22. *Weekly earnings* refers to gross earnings before taxation and other deductions have been made. It comprises *overtime earnings*, which refers to payment for overtime hours as defined above, and *ordinary time earnings*, as defined in paragraphs 23 to 26. It includes one week's proportion of payments made other than on a weekly basis, e.g. salary paid fortnightly or monthly and paid annual or other leave taken during the specified pay-period. Pay in advance, retrospective pay and annual or periodic bonuses, etc. are excluded.

23. *Ordinary time earnings* refers to that part of weekly earnings which is attributable to ordinary time hours, as defined in paragraph 21. It comprises *payment by measured result, award or agreed base rate of pay* and *other earnings* (excluding overtime).

24. *Payment by measured result* refers to payment by incentive, piecework, task bonus, commission, etc.

25. *Award or agreed base rate of pay* refers to the award, etc. rate of pay for ordinary time hours paid for, and includes all allowances (other than overtime) specified in the award, etc.

26. *Other pay* refers to ordinary time earnings not included in payment by measured result nor in award or agreed base rate of pay described above. It includes attendance and good timekeeping bonuses, profit-sharing and any other forms of over-award, etc. pay.

27. *Median earnings* is the amount which divides the distribution into two equal groups, one having earnings above the median and the other having earnings below it. Medians were calculated from grouped data, linear interpolation being used within the class interval in which the median fell.

28. *Mean (or average) earnings* is the amount obtained by dividing the total earnings of a group (e.g. full-time employees) by the number of employees in the group.

29. *Capital cities and other areas*. The classification is based on the postcode of the employee's place of employment or base of operations as shown in item B on page 6. Postcode boundaries in capital cities do not correspond exactly with those of Capital City Statistical Divisions used for some other statistical series; however, postcode areas have been selected so that the correspondence is as close as possible. The postcodes used for capital cities are : Sydney 2000 to 2263, 2507, 2560 to 2574, 2740, 2749 to 2754, 2756 to 2763, 2765 to 2787; Melbourne 3000 to 3211, 3335 to 3337, 3427 to 3429, 3750 to 3815, 3910 to 3916, 3926 to 3944, 3976 to 3984; Brisbane 4000 to 4199, 4203 to 4223, 4270 to 4287, 4300 to 4305, 4340, 4346, 4381, 4500 to 4514, 4520 to 4521; Adelaide 5000 to 5199, 5341 to 5343, 5400, 5434 to 5440, 5573, 5600 to 5601, 5606, 5680 to 5749; Perth 6000 to 6199, 6201 to 6205, 6211, 6553 to 6558; Hobart 7000 to 7101, 7150 to 7152, 7170 to 7177, 7201, 7207, 7400 to 7407, 7450 to 7457; Canberra 2600 to 2617, 2902, 2903 and 2911. Other postcodes are allocated to 'other areas'.

(a) Hourly ordinary time rate is calculated by dividing the sum of award pay, payment by measured result and other pay by ordinary time hours paid for. Some employers base overtime rates on award pay only, while others include other pay. Other factors which influence the ratio include award specifications, number of overtime hours worked by an employee and the presence of shift penalties in ordinary time pay or in overtime pay.

(a) See page 3, paragraphs 8 to 10. (b) Includes overtime earnings and overtime hours. (c) A substantial proportion of persons in the labour force in this occupation group is excluded from this table because managerial, executive and professional employees are excluded from this table and because of restrictions in the scope of the survey.

TECHNICAL NOTE

Introduction

Since the estimates in this publication are based on information relating to a sample of employees they are subject to sampling variability; that is, they may differ from the figures that would have been produced if the information had been obtained for all employees. This difference, called sampling error, should not be confused with inaccuracy that may occur because of imperfections in reporting by respondents; such inaccuracy is referred to as non-sampling error, and it may occur in any enumeration, whether it be a full count or only a sample. Efforts are made to reduce the non-sampling error by careful design of questionnaires and detailed checking of completed returns.

2. The sampling error associated with any estimate can be estimated from the sample results. One measure of the sampling error is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample of employees was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been produced if information had been obtained for all employees, and about nineteen chances in twenty that the difference will be less than two standard errors.

3. Another measure of the sampling error is the *relative standard error*, which is obtained by expressing the standard error as a percentage of the estimate. Both measures are used in the following discussion of the reliability of the estimates.

4. With the exception of estimates relating to occupations, overtime earnings and hours, payment by measured result and other pay, estimates with a relative standard error greater than 15 per cent have not been included in this publication. For occupations, estimates with a relative standard error greater than 7 per cent are not shown. For other categories all estimates for which the relative standard error is less than 20 per cent have been published; estimates whose relative standard errors are 20 per cent but not more than 30 per cent have also been published if the standard errors are not greater than \$1.00 or 0.5 hours.

5. As it is not practicable to include the standard errors of all estimates in this publication, a graph and tables have been provided to give an indication of the magnitude of the standard errors. These relate to the following groups of tables:

Tables 1-17 (Distribution)

These distribution tables are based on estimates of numbers of persons in various ranges of earnings or hours. The graph on page 44 shows the decrease in the relative standard error for numbers of persons as the estimate increases. An example of the use of the graph in relation to Table 4 on page 11 is as follows: the estimate for the earnings range \$400.00 to \$450.00 for Victoria is 16,000 males. The upper curve on the graph shows that the relative standard error of this estimate is

approximately 8 per cent, i.e. 1,300 persons. This means that there are about two chances in three that the figure which would have been produced if information had been obtained for all employees is within the range 14,700 to 17,300 and about nineteen chances in twenty that this figure is between 13,400 and 18,600. In Tables 1-17 it has been necessary to combine some ranges in order to avoid publishing estimates of less than 4,000 employees since relative standard errors of above 15 per cent are considered to be too high for most practical uses.

Tables 18-45 (Composition)

Tables A and B on page 45 show relative standard errors for some estimates of average weekly overtime and total earnings. An example of the use of Table A is as follows: the estimated average total weekly earnings of full-time non-managerial males aged 21 years and over in the mining industry is shown in Table 20 (page 21) as \$335.30. Table A shows the relative standard error of this estimate to be 0.9 per cent (or approximately \$3.00). This means that there are about two chances in three that a complete enumeration would have given a figure within the range \$332.30 to \$338.30 and about nineteen chances in twenty that the figure would be between \$329.30 and \$341.30.

The following notes give indications of sampling errors for data in Tables 18-45 which are not covered directly by Tables A or B:

All employees and private sector full-time non-managerial employees. Relative standard errors are approximately the same as those in Tables A and B.

Government sector full-time non-managerial employees. Relative standard errors for average total weekly earnings are slightly higher than those in Table A except in industries with relatively few government employees, where sampling errors are considerably higher.

Components of earnings. Relative standard errors of estimates of average award pay are approximately the same as those for average total pay in Tables A and B. Estimates of payments by measured result and other pay are approximately the same as those for overtime earnings shown in Tables A and B.

Average weekly hours paid for. Relative standard errors for average overtime hours are approximately the same as those shown in Tables A and B for overtime earnings. Sampling errors for average total hours are approximately half and those for average ordinary time hours about one third of the figures shown for average total earnings shown in Tables A and B.

Movements between years. Relative standard errors for estimates of changes (and percentage changes) in average weekly earnings and hours between one year and another are approximately one and a half times the relative standard errors of the 1979 estimates.

Tables 46-49 (Occupations)

Relative standard errors for average earnings published in these tables are below 5 per cent and for average hours below 3 per cent. Details are not shown for occupations or occupation groups where the

sampling error for any of the published averages is above these limits or where the estimate of numbers of employees covered by the survey is below 7,000.
